

# Machine Learning in Games

Adam Sattaur, Sam Devlin, Hendrik Baier

# Machine learning in games

- Move prediction
- Win prediction
- Churn prediction
- First purchase prediction

# Example application: Spades

- Move prediction
- Human gameplay

# Supervised learning

- Learning from examples

# Supervised learning

- Learning from examples
- e.g. “Cat or Carlos?”

Cat

# Generalisation

- Test set

# Installing TensorFlow

<https://github.com/NobodyIsThere/MLWorkshop>

Installation instructions in `tf_install/` folder. Install Python 3 if necessary.

Linux: included as part of `linux.sh`.

Windows: Python 3 installer included in `tf_install/python/`.

Windows:

Run commands in `windows.bat`.

Linux and Mac:

1. Run commands in first script
2. Run `source ./tf/bin/activate`
3. Run commands in second script

Break?

# TensorFlow example (tf\_install/test.py)

```
import tensorflow as tf
```

```
hello = tf.constant('Hello, world!')
```

```
with tf.Session() as sess:
```

```
    print(sess.run([hello], feed_dict={}))
```

# TensorFlow example (tf\_install/test.py)

```
import tensorflow as tf
```

```
hello = tf.constant('Hello, world!')
```

Create computation graph

```
with tf.Session() as sess:
```

```
    print(sess.run([hello], feed_dict={}))
```

List of values to compute

Provide inputs here

# Feedforward network example

## (feedforward.py)

```
x = tf.placeholder(tf.float32, shape=[None, input_length], name="input")
t = tf.placeholder(tf.float32, shape=[None, target_length], name="target")
```

Feed in multiple  
examples at a time  
(batches)

```
hidden_layer = tf.nn.relu_layer(x, hidden_weights, hidden_biases)
result = tf.nn.relu_layer(hidden_layer, out_weights, out_biases)

cross_entropy = tf.reduce_mean(tf.nn.softmax_cross_entropy_with_logits(
    labels=t, logits=result))
train_op = tf.train.GradientDescentOptimizer(0.01).minimize(cross_entropy)
```

# Inputs and outputs

```
x = tf.placeholder(tf.float32, shape=[None, input_length], name="input")  
.  
.  
.  
accuracy = tf.reduce_mean(tf.cast(correct_prediction, tf.float32))  
.  
.  
.  
with tf.Session() as sess:  
    acc, loss = sess.run([accuracy, loss_var], feed_dict={x: value_of_x})
```

# Convolutional neural networks

- Spatial dependence
- Weight sharing

# Convolutional neural networks

- Spatial dependence
- Weight sharing

# Convolutional neural networks

```
conv = tf.nn.relu(tf.nn.conv2d(x, W, strides=[1, 1, 1, 1],  
                               padding='SAME') + b)
```

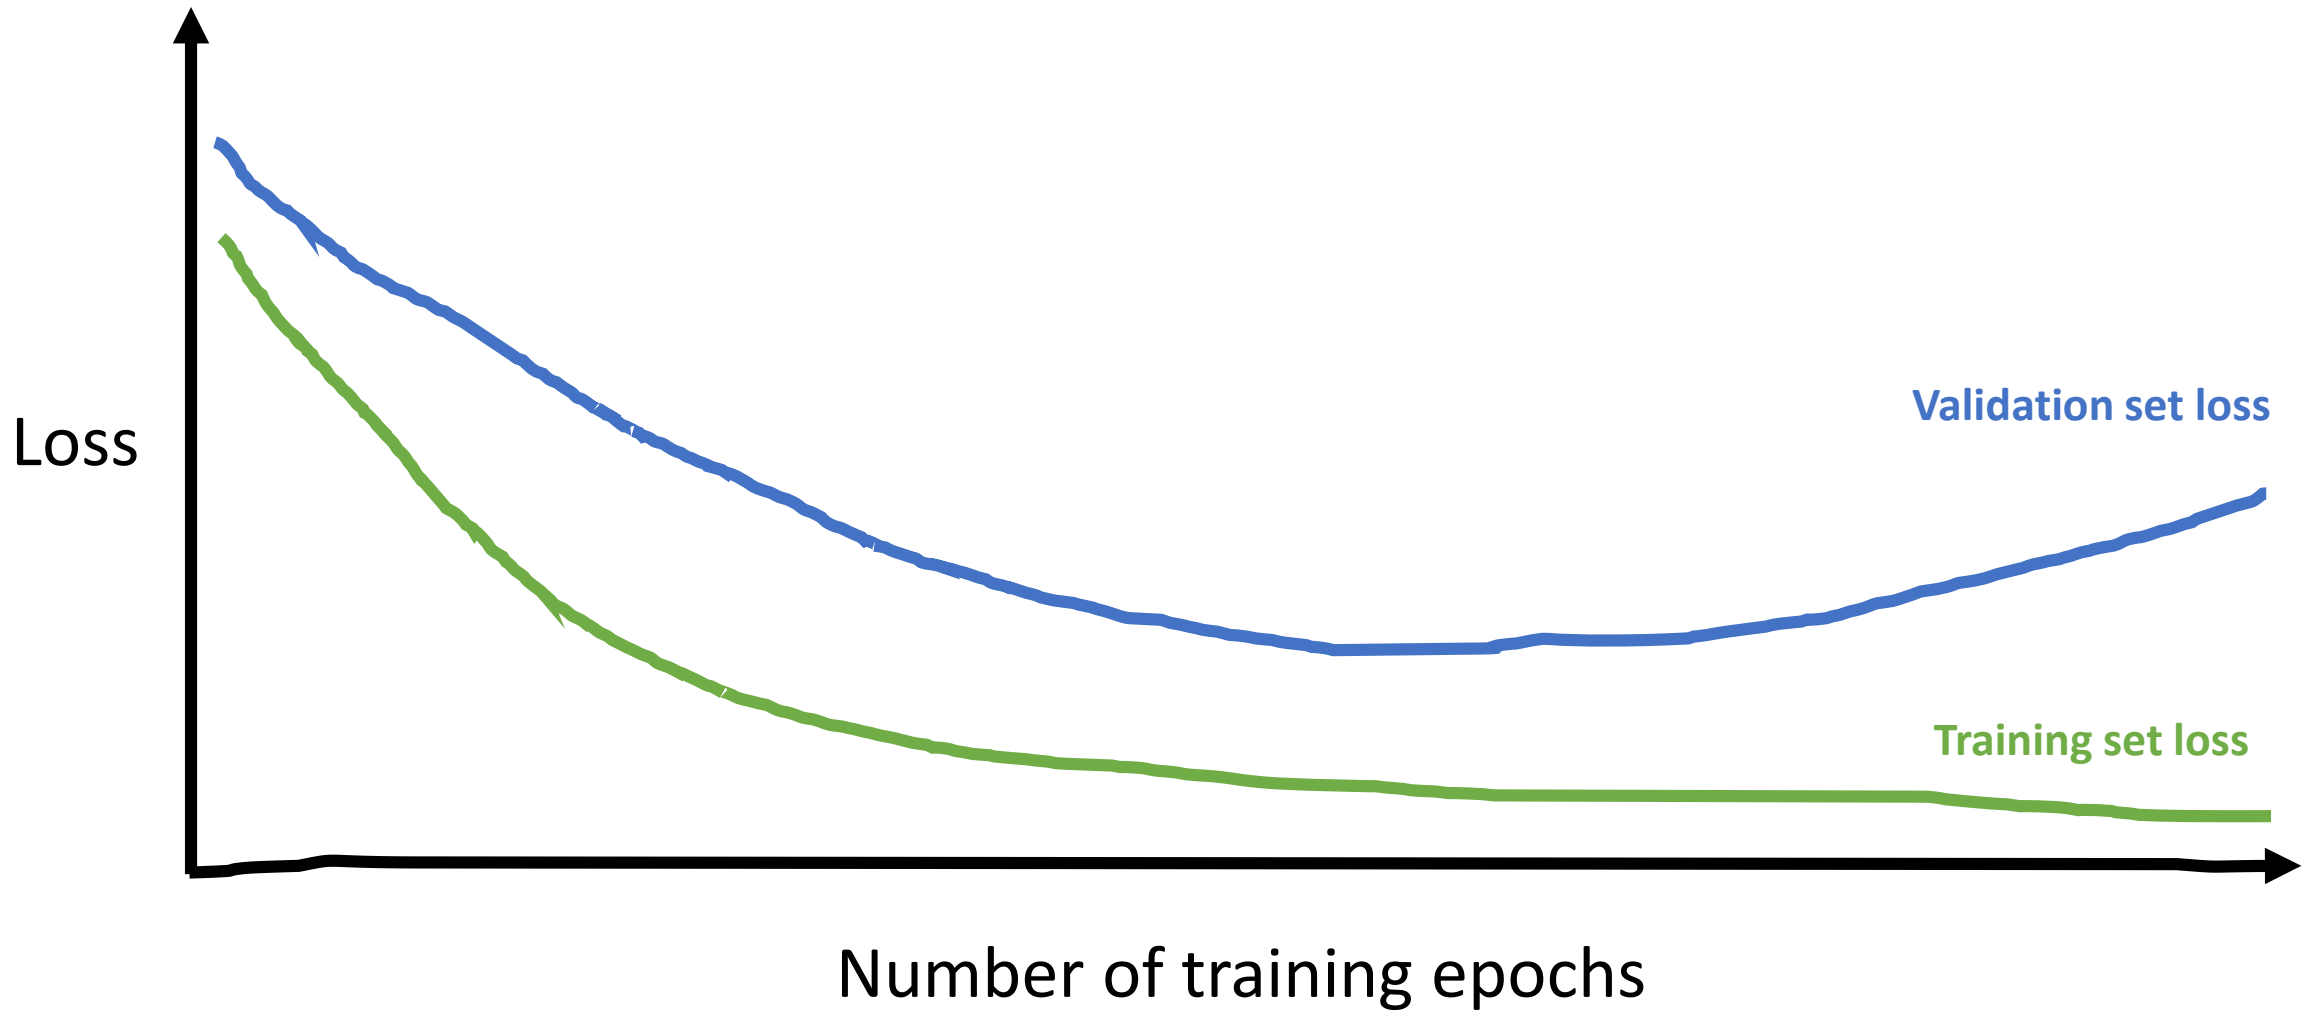

```
pool_layer = tf.nn.max_pool(conv, ksize=[1, 2, 2, 1],  
                              strides=[1, 2, 2, 1],  
                              padding='SAME')
```

# Regularisation

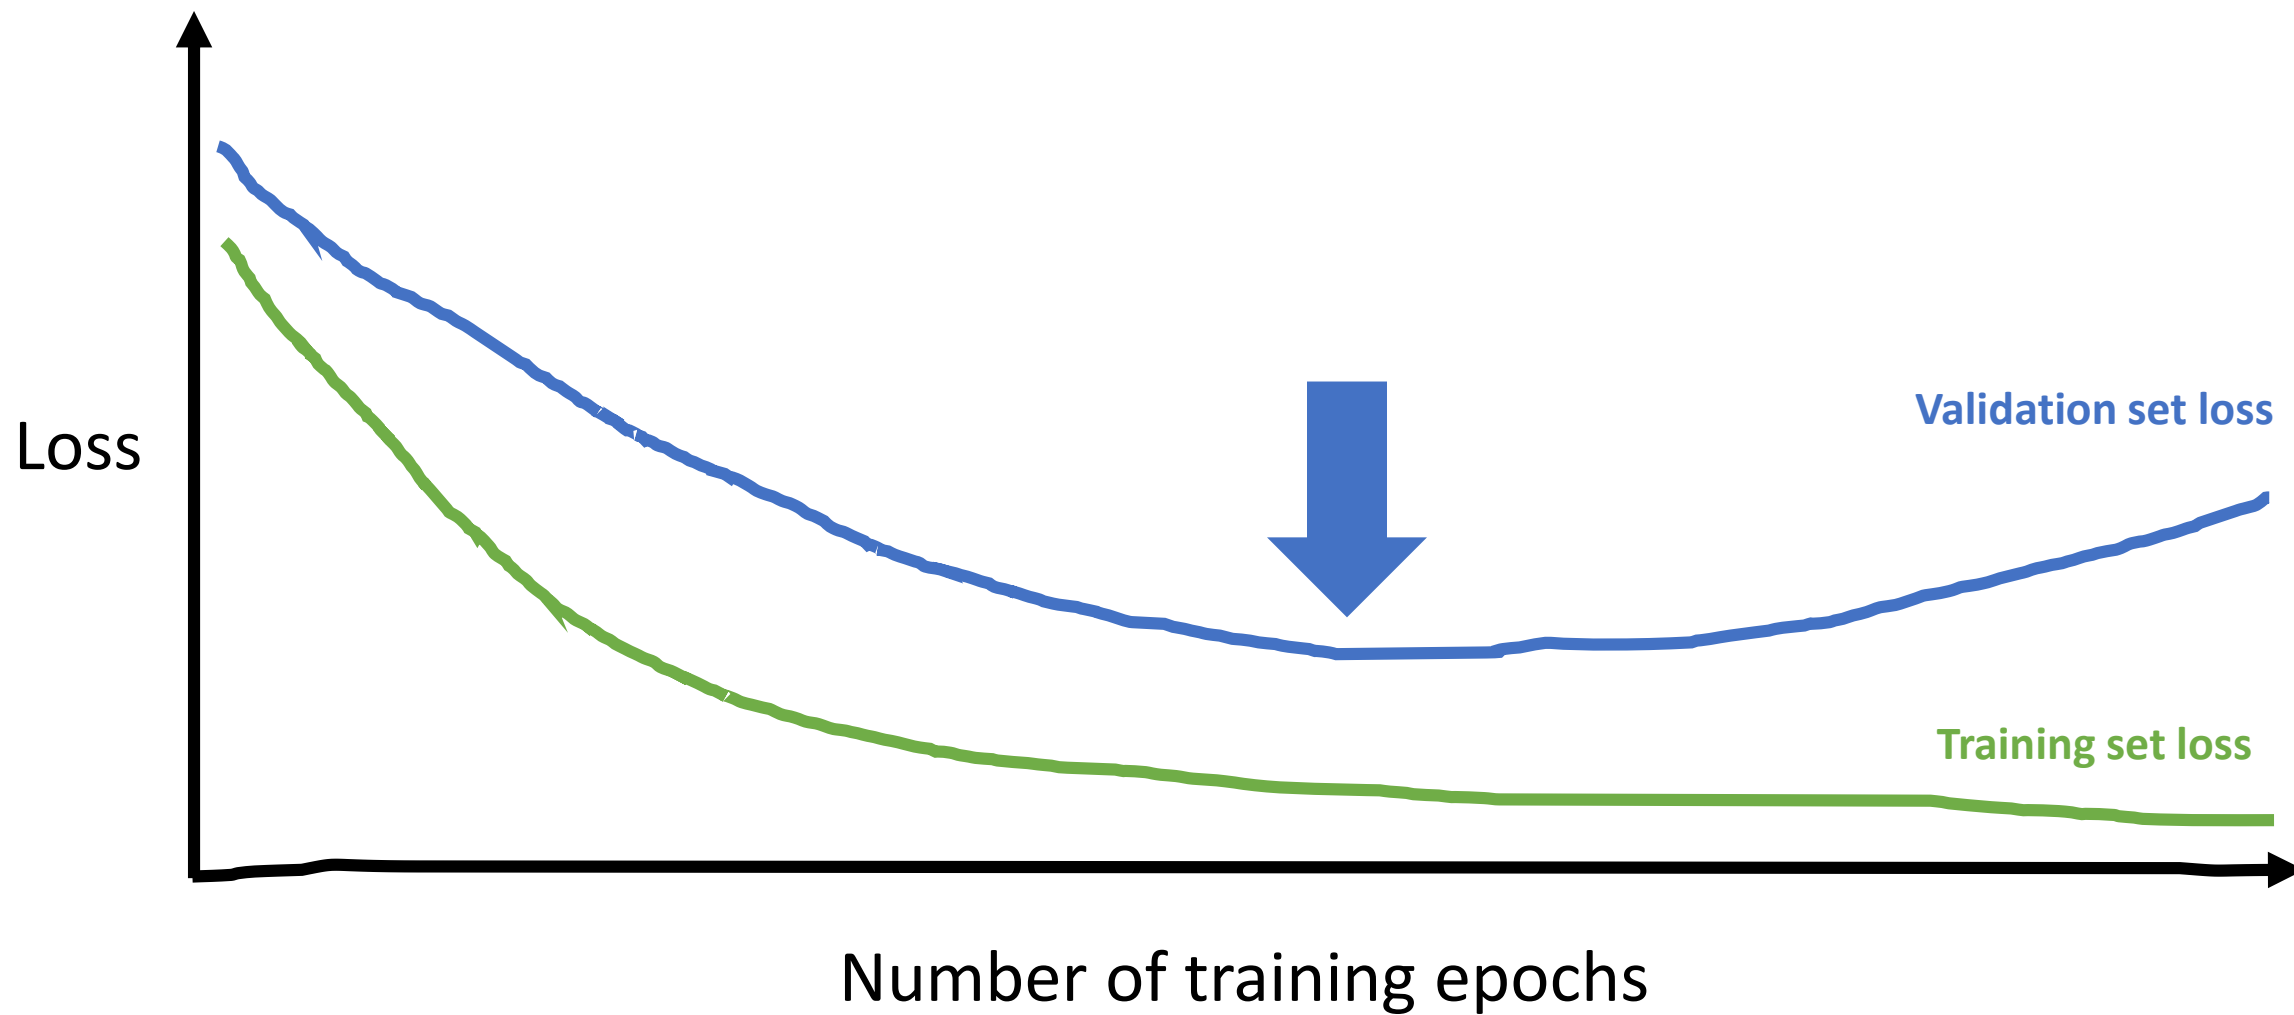

# Regularisation

# Regularisation

# Regularisation

- Early stopping
- Add terms to cost function
- Dropout

# Further reading

- Neural networks: [neuralnetworksanddeeplearning.com](http://neuralnetworksanddeeplearning.com)
- Deep learning book: *Deep Learning* – Goodfellow, Bengio & Courville
- Convolutional nets: Stanford course at [cs231n.github.io](http://cs231n.github.io) – also covers data preprocessing
